A post-doctoral position, funded by LABEX CHARM3AT (http://www.charmmmat.fr/fr/), is available jointly at Institut de Chimie Moléculaire d’Orsay of Université Paris- Sud/Paris Saclay (with Guillaume Vincent) and at the Institut de Chimie des Substances Naturelles of CNRS (with Xavier Guinchard) for 12 months from October 2019.

The aim of the project is to develop enantioselective catalytic reactions involving indoles. This program will be based on the expertise of our two teams in this area.

Representative publications of our teams:

The candidate should have a PhD in synthetic organic chemistry with good written and oral communication skills. A strong background in enantioselective catalysis is required and a good knowledge in nitrogen-containing heterocyclic chemistry would be appreciated.

Applications should include a CV, a list of publication, a research summary as well as the names of at least two references.

To apply, please contact: Dr. Guillaume Vincent (guillaume.vincent@u-psud.fr) and Dr. Xavier Guinchard (xavier.guinchard@cnrs.fr).
